

Subtransit Drive is expected This Holiday 2022 - Official Announcement

We are proud to announce Subtransit Drive - a multi-platform subway simulator with unique rolling stocks simulated like you've never seen before. This is the beginning of a series of ultra realistic simulators now available for pre-order on Apple AppStore and Google Play. Today is a major milestone for us and we can't wait to share the result of our long and intricate work on the fascinating world of underground rapid transit with you.

Welcome to the hidden underground world

Immerse yourself in areas of the subway normally never seen by the passengers. Face the challenges of the rush hour as a train driver and maintain the shortest possible interval - a single mistake can cause disruption for the entire line! Drive highly detailed trains and learn operating procedures on your own or together with your friends.

Immersive experience

The digital twin offers you a dynamic and lively handling experience, presenting the smallest aspects of the train's operation. All the controls are implemented, allowing you to experience the behavior of the train and its interaction with infrastructure. Signaling, radio communications and power distribution systems all respond to how you and others operate on the same line.

Motion authenticity

Subtransit Drive gives access to realistic physics and immersiveness never seen before in the genre. This is a deep dive into a new world of unparalleled attention to details. The exciting atmosphere of underground racing and extraordinary freedom of operating the controls with no limits will make you want to ride again and again.

Feel what it's like to drive a real train anytime and anywhere. Freeride, customized sessions, challenges, achievements, skills progression, support system, new look at the subway - all this in single player or in multiplayer mode. This is your new area for experimentation and learning.

Subtransit Drive is planned to be released on iOS by the end of this year and available for pre-order starting today. The version for Android OS will be available in the First quarter of 2023.
